

Maxim Energy Gel

- Citrus fruits flavour

Maxim Energy Gel is a highly concentrated carbohydrate gel. The carbohydrates fuel your muscles immediately and will keep you up to speed.

During long intensive exercise your blood sugar level can drop beneath normal values. Result: energy fade, concentration problems, decrease in performance. This problem often arises in endurance athletes such as triathletes, runners, cyclists, etc. On precisely these moments Maxim Energy Gel is the ideal energy booster. Maintain your blood sugar up to the mark and save your glycogen stores.

Maxim Energy Gel is the ideal energy booster

How to use

During exercise

During high intensity exercise, start consuming Energy Gel 30 minutes after having started exercise. Consume 1/3 of the content of the (100 g) pouch, immediately followed by a few sips of Energy Drink Electrolyte or water. Repeat this every 20-30 minutes. Consume a maximum of 1 pouch per hour. (If you prefer using single portion tubes, use one tube every 15-20 minutes).

During medium intensity exercise start consuming Energy Gel 45-60 minutes after you started exercise. Consume 1/3 of the content of the (100 g) pouch, immediately followed by a few sips of Energy Drink Electrolyte or water. Repeat this every 30 minutes.

(If you prefer using "single portion" tubes, use one tube every 20 minutes).

Also ideal to be used during breaks* in soccer, field hockey, basketball matches, etc.

*Consume during breaks in matches ½ of the content of a (100 g) pouch or 2 "single portion" tubes followed by a sufficient amount of fluid (Energy Drink Electrolyte or water).
